

THE FIRST TERM EXAMINATION

Part One: Reading and Interpreting (15 pts)

Read the text carefully then do the activities.

When one reflects on counterfeit and pirated goods, knockoff luxury handbags, fake watches, and free music and videos may come to mind. For some, the counterfeiting and pirating of goods may seem to be a victimless crime, where no one is harmed by the sale of imitation goods sold at much lower prices than brand name products. However, the world of counterfeiting and piracy stretches to nearly every product in the market and has often led to considerable harm to consumers, including death. The fact is that piracy and counterfeiting is not a victimless crime; it costs U.S. businesses more than \$200 billion each year and accounts for the loss of more than 750,000 jobs.

According to one study, about 45 percent of United States Gross Domestic Product (GDP) was protected by trade and service marks, copyrights, and patents. Such protection both encourages development of new products by rewarding innovators for their efforts and provides information and assurances of quality for consumers. Piracy and counterfeiting products deceive buyers and cause economic harm in the form of reduced employment and earnings for firms, inventors, and creators. Consumers are often victimized by purchasing pirated software that contains computer viruses or fake goods that pose health and safety risks. Firms and governments also expend substantial sums to protect against such counterfeiting and piracy, which ultimately is paid for by consumers in the form of higher prices and taxes. In many instances, counterfeiting and piracy have been connected to organized crime.

This is not just a U.S. problem; it is a worldwide problem. The Organization for Economic Co-operation and Development estimates that \$250 billion of counterfeit goods were traded internationally in 2007. However, when countries include their own domestic counterfeiting, this figure increases to around \$650 billion and has been predicted to reach \$1.7 trillion by 2015. The World Customs Organization estimates that 5 to 7 percent of world trade involves counterfeit goods.
